Hours: 8:00 a.m. - 5:00 p.m.

Monday thru Saturday

(Closed Sundays & Holidays)

A small field of *Malus floribunda*, Japanese Flowering Crabapples, 1.75-2.00" caliper.

Malus 'Indian Magic', 2.00-2.50" caliper on our Bellville Plot on Hines Avenue.

Malus 'Strawberry Parfait'

Malus 'Sugar Tyme'

“MALUS - THE FLOWERING CRABAPPLES”

The most important flowering and ornamental tree of the late 1990's. No other flowering tree can equal the Flowering Crabapple in hardiness, profusion of bloom, variations in growth habits, foliage colorations, and size and color ranges of its fruits. They are unequaled in providing natural foods for wildlife.

Many interesting varieties exist that provide for very narrow growth, or dwarf, weeping, tall, and erect varieties, shade tree variations, and varieties that provide gently spreading heads or stately formal growth patterns.

They excel in variations of fragrance, in color, form, and fruitfulness. Many are blight or disease and insect resistant.

Flowering Crabapples readily lend themselves for plantings on the home grounds, as well as for plantings in the largest cities, our hospitals, our parks, for highway plantings, or industrial plantings.

We sell thousands annually and devote about sixty-five acres to this very lovely ornamental tree — over 70 varieties.

“HEAVY TRANSPLANTED FLOWERING CRABAPPLES”

Each and every Flowering Crabapple we grow is given special attention. Every tree is either budded or grafted on the very best understock suited for that particular species.

All plants over 1/4" caliper are all planted with an 8' by 8' cross-checks. This spacing allows maximum head and branch development.

Wade's transplanted Flowering Crabapples are individually planted with its own circular drilled hole. Each tree goes into its final stage of development as a nicely branched, twice transplanted tree. Its root system is carefully pruned as it is planted in its own special hole. Extra precautions are given to the depth of the tree in its hole, and in particular, the distribution of the root system. The root system is planted in a symmetrical fashion with the main trunk being in the middle.

Our trees have balanced root systems. They are correctly planted individually, at the right depth, to assure you of a perfect tree. Root systems of our trees are not dug to one side or one-sided. It is quite common in the trade to see these one-sided plants, as it is much more economical to mass plant behind a furrow with a mechanical planter, which is the common practice at many commercial nurseries.

Survival of our trees is unexcelled.! If given proper care, our trees will grow into perfect specimen trees, typical of the species it represents.

We are very pleased and thankful for your continued support and purchases of the many fine plants including the Flowering Crabapples in past years. It is our purpose to continue growing Flowering Crabapples and to help develop new and better trees for the future. The Wade Families here are devoting much time and effort in the assembly and collection of our present list of Flowering and Ornamental Crabapples. If you have not yet tried our Flowering Ornamental Crabapples, we invite you to at this time. We are sure you will be quite pleased!

“OUR FLOWERING CRABAPPLES”

Most varieties have heavily branched tops. Since they were transplanted when 6 to 7' tall, and being nearly 1" in caliper, a nice, clean, straight trunk (depending upon species) is evident. Each year the tops are individually trimmed to represent the species. Narrow species were trained narrow; wide spreading varieties are trained wide; semi-erect strains are trained and kept to grow just that way. An average 2 to 2 1/2" caliper Flowering Crabapple, here at Wade & Gatton Nurseries, has had its top pruned and shaped at least three times.

Our continuous research for improved and best varieties has resulted in our present leadership in the field of transplanted, field grown, and larger B&B trees. Wade's superior root systems assured you of reliable transplanting success, year after year.

Our field grown Flowering Crabapples are spaced 8' x 8', are cross-checked in field rows. This spacing (64 square feet of growing space per tree) allows for maximum branching patterns and well shaped plants.

Individual selections and tagging is permitted, as is quite often the practice of many landscape architects, landscape contractors, and home owners. We welcome your visit here to view first hand our fine selection of quality trees!

As street trees, the Crabapple bear special significance. Limbing up where required does not pose a problem and overhead wires can seldom be entangled with Crabapple limbs.

Many communities have now lined their streets with many Crabapple species, cultivars and hybrids. These not only add interest during the flowering periods, but also during all seasons, on a year round basis. Maintenance costs are reduced on the Flowering Crabapples, as compared to larger shade trees. Such communities are greatly benefited by the tree lined streets, as community pride, and community respect start and begin to get people involved in the beauty of the plants and trees.

Malus 'Adams', ADAMS FLOWERING CRABAPPLE

(20' tall x20' wide in 20 years)

Clear red flowers; red fruit (5/8") is persistent; green foliage with a reddish tint; rounded overall form; disease resistant foliage.

Flower buds appear in clusters with deep pink coloring, opening into clear pink flowers (5 petals), expanding to 1 1/2" in diameter.

Red apples are 5/8" in diameter, and begin to show color in early July. Fruit is persistent and holds well until early Spring. Fruits dependably every year.

Leaves are 2 to 3" long, light green with a slight reddish tinge on new, young leaves. This cultivar is highly resistant to scab, cedar apple rust and fire blight.

Adams Crabapple establishes a dense, rounded head, growing nearly as wide as it does tall.

The Adams Crabapple originated and was named in about 1947, at the West Springfield residence of the late Walter Adams, past president of Adams Nursery, Inc. of Westfield, Massachusetts.

Culture: Prefers well drained soils. pH 6.0 to 7.5. Sun. Zone 4.

Note: We have been growing Adams Crabapple since 1985. Quite frankly, they are a greatly overlook, strong, sturdy, disease resistant, red flowering Crabapple. Our trees are extra nice, full, bushy trees spaced on 8' x 8' centers and are of specimen quality!

***Malus 'Amaszam'* AMERICAN MASTERPIECE FLOWERING CRABAPPLE**
 (25' tall x 18-20' spread)

The flowers of this crabapple hold their brilliant red from the first tight buds of spring until the last petals fall. Summer brings midnight-maroon foliage that is complemented by unique pumpkin-orange fruit in autumn. The fruit persists in its display well into the winter months. Pyramidal growth form. Zones 5-7.

***Malus 'Baccata Columnaris'* SLENDER SIBERIAN FLOWERING CRABAPPLE**
 (15-20' tall)

Very fragrant, five-petaled, single, white flowers are 1 3/4" diameter in size. Flower buds are creamy white, opening to pure white. Not a heavy flowering tree. A distinctly upright, columnar shaped tree. Grows 4 to 5 times as tall as it does wide. Leaves open green and stay green all summer long. Fruit is yellow with a red cheek, approximately 1/2" in diameter. Useful for group plantings, background plantings on large estates, parks or as narrow screens between properties. Culture: Prefers well drained soils with moderate moisture, clay loam is best. pH 6.5 to 7.0. Sun or partial shade. Zone 4.

| | | | | | |

***Malus 'Brandywine'*, BRANDYWINE FLOWERING CRABAPPLE**

(20' tall x 20' spread)

Flowers are double, deep rose-pink and very fragrant. Fruits are green (1/2"). Leaves are green with a slight tint of purple, which turns deep purple in Fall. Brandywine develops an upright, spreading form, and is a vigorous, symmetrical tree. This variety is a good substitute for the Japanese Flowering Cherries. Brandywine is a seedling hybrid between *Malus 'Lemoine'* and *Malus 'Klehms'*. It is registered at the U. S. Patent office and is one of Robert C. Simpson's newer original hybrids. Resembles *Malus 'Klehms'*, the improved Bechtel Flowering Crabapples, except it has better symmetry and more vigor. Culture: Prefers well drained soils. pH 6.0 to 7.5. Sun. Zone 4.

| | | | | |
|----|------------|------------------|--------|-------|

***Malus 'Calloway'*, CALLOWAY FLOWERING CRABAPPLE**

(20-25' tall x 15-20' spread)

Light pink buds opening to pure white flowers. Rounded growth habit. Fruit is 1" and red in color. Very colorful red fruits are the showiest and largest fruiting Crabapple we grow! Zone 5.

| | | | | |
|-----|------------|------------------|--------|--------|
| 18- | 2.00-2.50" | (26-28" B&B&R&W) | 175.00 | 154.00 |

Malus 'Candy mint', CANDYMINT FLOWERING CRABAPPLE (10' tall x 15' spread)
 (P. P. #6606). Irregularly spreading branches of this diminutive tree are smothered in spring with excellent, bright pink flowers. Dwarf character and abundant crop of bright red, persistent fruits hint at its origin as a Sargent seedling. Low, spreading growth habit. Foliage is purple becoming bronze-green. Fruit is 3/8" in diameter and red. Zone 4.

| | | | | |
|-----|------------|------------------|--------|--------|
| 10- | 3.00-3.50" | (32-36" B&B&R&W) | 325.00 | 295.00 |

| 8- | 4.00-4.50" | (40-42" B&B&R&W) | 435.00 | 395.00 |

Malus 'Candy mint', a low growing, deep pink, wide spreading, disease resistant, ornamental Flowering Crabapple. This is a 3" caliper tree, 8-9' wide and 6' tall.

Malus 'Centurion', CENTURION FLOWERING CRABAPPLE (25')

Also known as Malus 'Centzam'. Red flower buds open to a rose-red, five-petaled blossoms. Good, glossy, dark green foliage. Cherry-red fruit is small, 5/8" diameter, glossy, and remains effective for two months in Autumn. Excellent for street tree purposes because of its upright, vigorous, columnar growth habit. Useful in residential or commercial plantings, as it can add that elegant touch so necessary. A very disease resistant variety. Originated and registered with the U. S. Patent office by Robert C. Simpson. Named by Lake County Nursery Exchange in 1978. It was originally named and marketed by Robert C. Simpson in 1979. Culture: Prefers well drained soils. pH 6.5 to 7.0. Sun or partial shade. Zone 4.

| | | | | |
|-----|------------|------------------|--------|--------|

| 25- | 3.50-4.00" | (36-40" B&B&R&W) | 345.00 | 195.00 |
| 19- | 4.00-4.50" | (40-42" B&B&R&W) | 395.00 | 245.00 |
| 4- | 4.50-5.00" | (42-44" B&B&R&W) | 440.00 | 330.00 |

Malus 'Cinzam', CINDERELLA FLOWERING CRABAPPLE (8' tall x 5' spread)

The smallest Dwarf Crabapple of the Round Table Series, Cinderella is a petite selection with an extremely compact and upright habit. Cinderella is an all season tree, displaying tiny red buds in the Spring,; opening to snow-white flowers; attractive deeply lobed foliage and an abundant display of small gold fruit lasting into late Autumn. Disease resistant. Zone 4. Trees are top grafted atop a single stem, tree form. Compact, globe shaped. Trees are field grown, transplanted trees on 36" and 42" standards.

| | | | |
|----|--------------------------------------|--------|--------|

| 4- | 18-24" Head (14 Yr. Old-On Standard) | 225.00 | 195.00 |

Malus 'Coralburst', CORALBURST FLOWERING CRABAPPLE (8')

Also known as Malus 'Coralcole'. Plant patent #2983. Coral-pink flower buds open to five-petaled, semi-double, rose-pink flowers. Fruit is borne sparingly and is bronze-colored and less than 1/2" in diameter. Leaves are very small, dark green and are closely spaced on the stems. This variety is double top budded onto a 30" to 36" stem to produce a small, flowering tree. It is a novelty type tree that was introduced by the American Garden Cole, Inc. of Circleville, Ohio (now closed). The top of the tree is rounded and globular in shape, is slow growing, dainty, and almost miniature. It features a dwarf habit with attractive flowers. Use as a small specimen tree, as a conversation piece or use as a small pink flowering tree. Culture: Prefers good fertile soil, but well drained. pH 6.5 to 7.0. Sun. Zone 4.

***Malus 'Donald Wyman'*, DONALD WYMAN FLOWERING CRABAPPLE
(35-40' tall x 35-40' wide in 20 years)**

Expanding flower buds are pink, open to white, single flowers (5 petals), which are 13/4" across. Flowers annually. It produces a heavy crop of 3/8" bright red fruit. Dark green foliage all summer which is resistant to scab, cedar apple rust, fire blight, and is only moderately susceptible to powdery mildew. Fruit is retained well into the winter months where it is a good source of food for winter birds. A compact, rounded overall shapely tree. Requires very little pruning. Original plant was first found as a seedling at the Arnold Arboretum, in the late 1940's. It was named for Dr. Donald Wyman, a retired staff member of the Arboretum and a well known writer on gardening. Culture: Prefers a well drained clay loam soil. pH 6.0 to 7.0. Sun or partial shade. Zone 4.

Note: A very highly rated Flowering Crabapple, disease resistant, with lovely, relatively small red fruit in Autumn.

***Malus floribunda*, JAPANESE FLOWERING CRABAPPLE**

(12-15' tall x 10-12' wide in 15 years)

Many connoisseurs of Flowering Crabapples frequently admit this is one of their favorites. Colorful, dainty flower buds are deep pink capped with bright red flower petals that show excellent color a full two weeks before opening into a delicate pink mass of flowers which seemingly cover the entire tree. Flowers open in mid-season for Crabapples, and are fragrant, single (5 petals), are about 1 1/4" in diameter, are pink at first and rapidly change to a sparkling, near pure white. Floribunda flowers heavily, regularly, and every year without fail. Our transplanted trees start flowering at 5 to 6' in height.

Fruit is small (3/8" in diameter), red to yellowish-red in color, and are very attractive from late August to mid-October. Fruit is persistent, but seldom lasts into Winter because they are heartily relished by robins and cedar waxwings, which swallow the fruit whole in below freezing temperatures, when other food is snow covered or unavailable.

Leaves are 2" to 3" long, are dark green with good fertility, and are resistant to apple scab and black spot.

Floribunda has a broadly rounded top and is densely branched, unlike any other species. One large old specimen tree I know is 25' tall and 20' wide and is 30 years old. Its branches are irregular horizontally inclined, and is frequented by many birds of all kinds year round. Its inner branches have been thinned out, and looking up into the tree is very interesting, and truly makes a very nice ornamental flowering and shade tree.

This Japanese Flowering Crabapple did come from Japan and was introduced into the U.S.A. in 1862, making it the oldest specimen Crabapple in the horticultural trade today, and is a parent plant of many improved cultivars.

Culture: It is very hardy, tolerating sub-zero temperatures readily. Tolerates a wide variety of soil conditions, but prefers fertile, clay loam, well drained soils, but will tolerate a slight to moderate amount of wetness. pH 6.0 to 7.5. Sun or partial shade. Zone 4.

***Malus transitoria* 'Schmidcutleaf', GOLDEN RAINDROPS CRABAPPLE**

(20' tall x 15' spread)

The most unusual crabapple we grow, and perhaps the only one that could be described as having a delicate appearance. The fine textured foliage is deeply cut. The form is elegant, with slender limbs spreading horizontally from upright branches and the golden yellow fruit is truly tiny, 1/4". White flowers in Spring. Zone 4.

Malus 'Guinzam', GUINEVERE FLOWERING CRABAPPLE (10' tall x 10' spread)

A nostalgic Dwarf flowering Crabapple, Guinevere has mauve and white flowers simultaneously blooming throughout the spring season. The extremely dark, lustrous midnight green foliage has a distinctive deep wine frost. The persistent fall fruit is bright red. Rounded growth habit. A disease resistant tree. Zone 4.

Note: A distinctive growth habit! Trees are wide, short, artistically branched. A 4" caliper tree is only 8-9' tall x 6-7' wide!

| | | | | |

Malus 'Hamzam', HAMLET FLOWERING CRABAPPLE (10' tall x 10' spread)

In Spring Hamlet is a mass of deep scarlet buds opening to a bold display of fragrant rosy-pink flowers. The foliage has a unique light wine-red color. The abundant deep red fruit remains long into the fall season. Rounded growth habit. Zone 4. Our trees are top grafted on 3-4' standards. Trees form a very compact, dwarf, globose top. Trees have a very small head in relationship to caliper size.

Malus 'Harvest Gold' (Hargozam), HARVEST GOLD FLOWERING CRABAPPLE
(20' in 15 years)

Registered with the U. S. Patent office. Rich golden fruit is small (3/8" in diameter), is borne in abundance and simply covers the entire tree in a veil of gold in Autumn, remaining effective into late December. Harvest Gold is a vigorous, upright grower suitable for street tree use or individual specimen landscape use. Leaves have a good green color and show excellent disease resistance. Flower buds show a tinge of pink, but open into single (5 petals) white flowers of notable significance. Culture: Prefers well drained soils. pH 6.5 to 7.0. Sun or partial shade. Zone 4.

Note: The small upright growing form of the tree of the tree requires little to no pruning to maintain its form. It has proven to be salt tolerant and highly resistant to disease and urban pollution.

Malus 'Indian Magic', INDIAN MAGIC FLOWERING CRABAPPLE
(15-18' tall x 14-15' wide in 15 years)

Showy and colorful red flower buds open to attractive rose-red to pink, five petaled blossoms, 1 1/2" in diameter. Blossoms literally cover the entire tree. After full color of pink for about one week, the flowers change to white, at which time they slowly flutter away in the gentle breezes. Shaded flowers hold their petals till last.

Indian Magic's fruitfulness is unequalled! Almost every flower, dependably every year, produces small (9/20th to 1/2" in diameter) glossy red apples. The apples become attractively noticeable in August and provide an outstanding display of red until frost and leaf drop, at which time the fruit changes to a golden-orange then to a glossy brown in December and through Winter. Fruits are elongated and noticeably long. Its inner flesh is noticeably dark red. Its fruits are persistent, and hold all winter, and it is not unusual to find some fruit still holding tightly when the tree comes into flower in April.

Beautiful small red fruit on *Malus 'Indian Magic'*

Beautiful pink flower buds and flowers on *Malus 'Indian Magic'*

***Malus 'Indian Summer'*, INDIAN SUMMER FLOWERING CRABAPPLE
(18' tall x 20' spread)**

Flowers are rose-red. Fruits are bright red, 5/8" in diameter and persist well into winter. Fruits are unexcelled for late summer attractiveness. Foliage is bronze-green with good apple scab resistance and excellent resistance to cedar apple rust, mildew and fire blight. Culture: Prefers well drained, almost any soil type. pH 6.0 to 7.5. Sun or semi-shade. Zone 4.

Malus 'Klehm's Improved Bechtel',

KLEHM'S IMPROVED BECHTEL FLOWERING CRABAPPLE

(20' tall x 18' spread)

Double pink flowers are truly lovely in bloom, resembling a rose bud. Green leaves in spring and summer usually falling in late summer. Stiff branching is unique and artistic. Large green fruit in Autumn. This form better than the original Bechtel Flowering Crabapple. Zone 4.

Malus 'Lancelot Dwarf' (Lanzam), **LANCELOT DWARF FLOWERING CRABAPPLE**

(8-10' tall x 8' spread)

A Genetic Dwarf Flowering Crabapple. Plant patent #8056. Lancelot is a compact, genetic dwarf. Spring brings abundant brilliant red flower buds that open into snow white blossoms. The compact, upright dwarf, dense canopy of attractive crisp green summer foliage is a joy to see. Fall brings a show of elegant golden foliage with luminous golden fruit only 3/8'' in diameter which holds well into January. Our trees are all top grafted on to a single stem - 3-3.5' standard. Each is a specimen!

***Malus 'Liset'*, LISET FLOWERING CRABAPPLE (15-18' tall x 10-12' spread)**

Dark crimson flowers; dark crimson fruit (5/8") is non-persistent; new leaves are red maroon and turn dark green; upright columnar growth; resistant to scab and cedar apple rust.

Flowers are large, nearly 1.5" in diameter, with flower buds being bright crimson, opening to dark red, then as they age they turn rose-red. Fruits are dark crimson to maroon-red, are glossy and 5/8" in diameter, dropping in late Fall.

Foliage is purplish at first, but turns bronzy-green as they mature. Develops into a round topped tree.

Liset is a tidy, well proportioned little tree, well suited for small garden areas. They flower while very young with almost luminescent qualities as they appear within the foliage.

Culture: Prefers well drained soils. pH 6.0 to 7.5. Sun. Zone 4.

| | | | | |

***Malus 'Lollizam'*, LOLLIPOP FLOWERING CRABAPPLE (10' tall x 10' spread)**

Top grafted atop a 4' standard. Tree grows into a neat, tidy, compact head. It resembles a tightly trimmed globe, ball or lollipop (hence its name).

This distinct new cultivar is very prolific bloomer with pink single flower buds that open into pure white blossoms. Disease resistant foliage that requires little or no pruning to maintain its form. Foliage is an attractive, crisp green color all summer. Fruit is small, 3/8" in diameter, reddish-amber in color, not very plentiful, but relished by birds and no problem. Culture: Prefers well drained soils. pH 6.0 to 7.5. Sun. Zone 4.

***Malus 'Louisa'*, LOUISA FLOWERING CRABAPPLE (15' tall)**

Glossy dark green foliage on tree with broadly weeping habit. Pink flowers in May are followed by persistent 3/8" yellow fruit in Fall. Zone 4.

Our trees are very short with a wide head. Trees that are 7-8' wide seem only to get 6-7' tall with no apical dominance, which makes them distinctively different! Makes a distinctly different specimen weeping tree!

Malus 'Mary Potter', MARY POTTER FLOWERING CRABAPPLE
 (8-10' tall x 8-10' wide in 15 years)

Rose colored buds open pink and turn white, are large, single, insignificant, yellow fruit; heavy textured green leaves; broad, spreading vase-shaped growth. Spur-type growth.

Pink flower buds open into pure white, single, five-petaled, 1" diameter flowers. Very similar to *Malus sargentii*. A cross between *Malus sargentii rosea* and *Malus atrosanguinea*, originating at Arnold Arboretum in 1939. The pure white flowers are produced in great profusion and provide a dramatic display of color. The distinct habit of growth of this cultivar provides the landscape architects with considerable variety. Leaves appear after flowering, are dark green and stay green all summer. A strong grower that is broad topped and grows shrub-like or becomes a rounded small tree. Foliage is apple scab resistant and resembles the foliage of *Malus sargentii*. Fall fruits are small, red, 1/2" in diameter. Culture: Prefers good soil drainage, sandy or silt clay loam. pH 6.0 to 7.5. Sun or partial shade. Zone 4.

| | | | | | |

***Malus 'Pink Princess',* PINK PRINCESS FLOWERING CRABAPPLE
(6-8' tall)**

A pink flowering form of *Malus sargentii*. Leaves slightly reddish and very disease resistant. Foliage mound is low spreading like *Malus sargentii*; seldom growing over 6-8' tall, but grows wider than tall. Unique form is distinctly different than any other crabapple. Zone 4.

| | | | | |
|-----|------------|------------------|--------|--------|

Malus 'Pink Princess', a pink flowering form of the dwarf, Sargent Flowering Crabapple.

Malus 'Pink Spires', PINK SPIRES FLOWERING CRABAPPLE
 (12-15' tall x 7-8' wide in 15 years)

Deep pink flowers; near deep green summer leaves; copper colored fall color; purplish-red fruit; inconspicuous; narrow, upright spreading form; disease resistant foliage.

Bright carmine-red flower buds unfold to deep true pink flowers (5 petals). The flowers are medium sized, fragrant, and are borne in profusion. Flower color carries for a long distance. Color is near a "Betty Prior Rose" pink. Buds are carmine-red and turn slightly lighter, holding the pink color for many days.

Leaves are slightly bronze colored as they unfold, and the flower color contrasts well against the foliage color, attributing to the floriferousness of this tree. The leaves soon turn a deep bronzy-green and hold color well, only to again turn a very lovely copper fall color as frosts appear.

Fruit is medium sized, purplish-red and is not borne in profusion, therefore it is seldom noticed.

Pink Spires has medium sized branches that ascend into a moderately narrow, yet upright spreading in overall form.

We have found this variety to possess the best overall disease resistance for those who wish a nice, neat, small, fairly narrow, pink Flowering Crabapple.

Culture: Prefers well drained soils. pH 6.0 to 7.5. Sun or partial shade. Zone 4.

Note: We consider this to be one of our best Pink Flowering Crabapples to date.

***Malus 'Prairiefire'*, PRAIRIEFIRE FLOWERING CRABAPPLE (20' tall x 20' spread)**

Upright, spreading, rounded growth habit. Purple foliage becomes reddish-green with maturity. Bright pinkish-red flowers in Spring. Dark red, 3/8" - 1/2" fruit in Autumn. Excellent scab, rust, mildew and fire blight resistance. Zone 4. Note: This relatively new Crabapple is one of our best, pinkish-red Flowering Crabapples.

Malus 'Purple Prince', PURPLE PRINCE FLOWERING CRABAPPLE

(20' tall x 20' spread)

PP #8478. An outstanding rosy bloom crabapple. The purple bronze foliage and bright flowers rival Liset, but Purple Prince does not suffer from stem splitting and is faster growing. Rounded growth habit. Maroon, 3/8" fruit. Very disease resistant. Probably our newest and best deep red Flowering Crabapple. Summer foliage is a bronzy-green. Fruit is not messy, as it holds on all winter and dries up. Zone 4.

Malus 'Red Barron', RED BARRON FLOWERING CRABAPPLE

(18' tall x 8' wide)

Our best narrow, columnar, purplish foliated ornamental Flowering Crabapple. Flowers are very dark red amid purplish leaves in early Spring. Good resistance to most Crabapple problems. Excellent resistance to mildews. Dark red fruit in Autumn is small, 1/2" in diameter. Not a heavy fruiting variety. Prefers well drained soils. pH 6.5. to 7.0. Sun or partial shade. Zone 4.

Malus 'Red Jade', RED JADE WEeping FLOWERING CRABAPPLE (10-15')

Plant Patent #1497. Introduced to us by the Brooklyn Botanical Gardens of New York in 1953. In my opinion, this is the best of the Weeping Crabapples. Red Jade is the only green leaved Weeping Crabapple of significance today, and as most green leaved Crabapples do, it blends well into landscape designs better than most red or reddish leaved varieties.

In early Spring, deep pink flower buds are evident a full two weeks before opening. As the buds open, the five petaled flower takes on an even deeper pink, then fades to a pink blush, then to a pure white in two to four days. Outside petals are the most colorful. Flowers appear individually, alternately, and are 13/4" in diameter. Flowers are delightfully fragrant and appear on long stems. Flowers are self-pollinating.

Fruits are green in early summer and turn jade red in late summer. Fruits are smaller than most other Weeping Crabapples, are egg-shaped, 1/2" in diameter, cherry-like, and droop noticeably and attractively on long stems (11/2-2" long). Fruit is exceptionally attractive all through October, November and December. Fruits hold tight, are very persistent, and will hold until Spring or until eaten by winter birds. The winter birds relish these small fruits by eating them whole, as opposed to larger apples they simply tear apart and eat the seeds within.

Red Jade's leaves are green from the first small leaves until late Fall. Branches are slender and weep gracefully, taking on rather artistic, picturesque branch patterns as it ages.

Very useful as an individual specimen tree, faced down with Taxus 'Wardi' or used with bark, gravel mulches, or boulders in small garden areas. Its attractive green foliage and white flowers are neutral and blend well with most backgrounds.

Culture: Prefers well drained soils of silt clay, or sandy silt clay loam. Colors a darker green with good fertility. pH 6.0 to 7.5. Sun or partial shade. Zone 4.

***Malus 'Royal Gem'*, ROYAL GEM FLOWERING CRABAPPLE (5-8' tall x 5-8' spread)**

A top grafted tree on a 3' standard. Very dwarf and compact grower. Our most dwarf Flowering Crabapple! Growth is only a few inches per year. Twelve to fifteen year old trees have only a 15-18" globose head. New leaves are a crimson red in early spring and turn to a dark green by mid summer. Flowers in spring are single, and rose-red in color. Sparse dark red fruit in Autumn. Yellow fall foliage color. Prefers well drained soils. pH 6.0 to 7.5. Sun. Zone 4. Plant as a miniature specimen tree in a small planting area. A rarely found ornamental Flowering Crabapple!

***Malus 'Royal Raindrops'*, ROYAL RAINDROPS FLOWERING CRABAPPLE
(20' tall x 15' spread)**

Bright pinkish red flowers combine with deep purple cutleaf foliage to present one of the most exciting crabapples we have seen in years. Deeply lobed leaves and upright form with good branching and density are inherited from its Golden Raindrops parent. Nursery growth is excellent and its displays good to excellent resistance to the common diseases including fire blight. Fruit is 1/4", red and persistent. Zone 4.

***Malus sargentii*, SARGENT FLOWERING CRABAPPLE (6-8' tall x 6-7' wide)**

Pure white, fragrant flowers; small glossy red fruit; green summer leaves; orangish fall color; dwarf, spreading tree; disease resistant foliage.

Small red flower buds open into pure white, small, 1/2" in diameter flowers. The flowers are single, five petaled, fragrant, appear annually and are borne quite heavily. Fruits appear in great masses in late August, are 1/4" in diameter, persist into Winter, but are usually eaten by Cedar Waxwings and Robins in late Fall.

Leaves are dark green, frequently three lobed, are healthy, disease resistant to black spot, downy mildew, powdery mildew and apple scab. The red fruits in September are accented well against the dark green leaves. Leaves often have a rather good yellow-orange Fall color. This coloring often is quite attractive and not usually a noticeable characteristic of the family of Flowering Crabapples. Branches are often spur-like.

With moderate trimming, this dwarf, ornamental tree can become a most interesting and picturesque tree. By bud pruning and shaping, a truly interesting, crooked, weeping, or horizontal branches can easily be shaped into the plant. Birds like to set on these horizontal branches as they find them a useful perching place near a bird feeder.

Sargent Crabapple was first grown by seed from Japan in 1892 by C. S. Sargent, former director of the Arnold Arboretum.

Sargent Crabapple may be used very effectively as a specimen tree in small home landscape settings or confined plant beds and garden areas. Also use in groups of 3, 5 or 7, on large estates, parks, commercial or bank plantings. Very useful for dwarf screens.

Culture: Prefers adequate moisture, but must have good drainage of soil. Prefers a sandy or silt clay loam, but will tolerate gravelly or stoney soils well. pH 6.0 to 7.5. Sun or partial shade. Zone 4.

***Malus sargentii* 'Tina', TINA SARGENT FLOWERING CRABAPPLE**

A newer concept for this very dwarf Flowering Crabapple. Grafted atop a 3' single stem. Yes, a 3' on standard dwarf. Just right for that small garden area, and room for a nice bed of perennials beneath. Flowers are fragrant, white, with a slight pink to reddish blush on the flower buds. Fruits are small, glossy red, 1/4" in diameter, persist into Winter. Excellent disease resistance. Refer to *Malus sargentii* as it is almost identical in every way except that its just a slightly smaller tree on a standard.

Note: The most unique, true genetic dwarf ornamental flowering Crabapple today! Fragrant white flowers. Disease resistant!

| 45- | 60-68" W.Head | 5-6' Tall | 3.50-4.00" | 395.00 | 345.00 |

Note: Caliper and top size is approximately, as each tree differs somewhat. But above guidelines are very close. We have been growing 'Sargent Tina' since 1987, and it is one of our better selling very dwarf Flowering Crabapples.

Malus sargentii 'Tina' used to compliment our Bellville Bandstand. In background, across street is *Malus* 'Van Eseltine' and 'Liset'.

Malus 'Snowdrift', SNOWDRIFT FLOWERING CRABAPPLE
(15-20' tall x 12' wide in 20 years)

White flowers in mid season (1 1/2" in diameter); 3/8" orange-red fruits; lustrous medium green leaves; upright spreading, but oval shape.

A White Flowering Crabapple, developed and promoted by the Cole Nursery. Usually heavily borne, white flowers are preceded by lovely pink flower buds. Fruit is 3/8" in diameter, and has glossy orange-red color, holds well into the winter months. Foliage is a good clean green throughout the growing season. Mature trees are semi-erect, and broadly oval in stature. This variety is very similar to *Malus zumi calocarpa*. Not susceptible to most leaf problems prevalent to some variety of Flowering Crabapples. Excellent and heavily recommended for street tree use. Very hardy and vigorous growing. Culture: Prefers sandy or gravelly silt clay loam, but will grow almost anywhere. Prefers good drainage, as do most Flowering Crabapples. pH 6.0 to 7.5. Sun or partial shade. Zone 3. Trees are grown on MM-111 Rootstock, a non-suckering rootstock.

Note: Our most popular Crabapple - Snowdrift sets the standard as to how most other Crabapples are judged.

Disease Resistance: Scab-good; cedar apple rust-excellent; mildew-excellent; fire blight-poor. Although we have not observed much fire blight. In most landscape designs it remains one of the best.

Note: We have trimmed these into higher headed, almost tree form, with lower, smaller limbs trimmed off. Also note that they are growing rather narrow. Good for a narrow screen, for golf courses or as an individual specimen tree. Absolutely fruitless....heaviest flowering of all ornamental Flowering Crabapples.....pure white flowers!

***Malus 'Strawberry Parfait'*,
 STRAWBERRY PARFAIT FLOWERING CRABAPPLE
 (18' tall x 20' wide)**

Plant Patent #4632. A hybrid cross between *Malus huphensis* and *Malus atrosanguinea*. Red flower buds open to a nice pink. Flowers: Are large, generally light pink with a deeper pink margin. Foliage is thick and leathery, reddish in Spring, becoming deep dark green in Summer. Leaves are resistant to scab and mildew. Grows irregular and upright, like its fruiting parent, *Malus huphensis*. Fruit is small, 3/8" in diameter, is yellow with a red blush. Zone 4.

Malus 'Sugar Tyme' (Sutyzam), SUGAR TYME FLOWERING CRABAPPLE (18')

Plant patent #7062.. A new and exciting Flowering Crabapple! Buds are pale pink and flowers are snow white completely covering the tree. Crisp green, disease resistant foliage. Masses of rock red, 1/2", persistent fruits become effective in mid October, remaining colorful into January and still has reddish color in Spring when eaten by birds. Vigorous, upright growth habit. A creation of Professor Emeritus Milton Baron of Michigan State University. Zone 4.

Note: Sugar Tyme Crabapples grow into well balance, strongly branched trees, growing into vigorous upright oval form. Flowers are a sugary-white and fragrant, and literally cover the tree when in bloom. Fruit is formed in masses of vivid red and is most effective in mid-September and remains effective and colorful through January, which then are usually eaten by songbirds throughout the winter. Sugar Tyme is considered a maintenance free tree, as it requires little to no maintenance to maintain its beauty and form.

***Malus 'Van Eseltine'*, VAN ESELTINE FLOWERING CRABAPPLE**
 (15-18' tall x 6' wide in 15 years)

Extra lovely, double rose-pink flowers; yellow with red cheek fruit; green leaves; narrow, columnar, upright ascending, nearly vertical growth habit.

Extra ordinary very lovely, double (13-19 petals) rose-pink flowers. These are borne dependably every year in great masses that appear to cloak the entire length of nearly all the branches all over the tree. Flower buds are attractive as they expand, are deep rose-red, slowly lightening to rose-pink and opening to a colorful rose-pink, then slowly lightens in color, but holding the pink color for a long time before becoming near white. Each flower is itself a true art to behold. Each is attached to a long downward weeping stem, each a full 2" in diameter with lovely, long, closely seated petals. As the flowers age, they slowly flutter away in gentle breezes, sometimes nearly lightly carpeting the ground beneath, resembling a light coating of snow.

Fruits are basically dull yellow, but have a brown or light carmine cheek on the sunny side. Fruits are borne more heavily every other year, are 5/8" to 3/4" in diameter, are very attractive because they also hang downward on a long stem. The fruits turn a lovely brown in the Fall, and the few remaining fruits that are missed by the birds, persist even after flowering.

Leaves are a glossy green, have a slight reddish overcast. Flowers contrast extra well against the leaves, contributing to and helping to accent the lovely flowers.

Branches ascend nearly vertical into a very narrow, columnar, not quite vase shaped tree. Branches are strong, sturdy, wind and ice damage resistant. Tree is basically slow growing. Makes an excellent street tree. Culture: Prefers well drained soils. pH 6.0 to 7.5. Very hardy. Sun or partial shade. Zone 4.

Note: Large Specimen Flowering Crabapples such as these 6" caliper and over can be moved with a large 65", 80" or 90" Tree Spade.

Special prices can be provided upon request.

Malus 'Van Eseltine' used as a street tree on Howard Smith Boulevard in Bellville, Ohio.

Malus 'Velvet Pillar', VELVET PILLAR FLOWERING CRABAPPLE

(15-18' x 12-14' wide in 15 years)

Plant patent #4758. Deep pink flowers; sparse reddish fruit; purple foliage; compact, tightly upright narrow form.

Deep pink flowers. Sparse reddish, 1/2" fruit. Purple foliage. Tight, well balanced, upright, narrow growth habit. Branches ascend well to form a tight bush or tree, very suitable as a hedge plant or narrow screen, if planted in a row. Makes an ideal red leaved tree in any small garden or planting area. Culture: Sun or partial shade. pH 6.0 to 7.5. Zone 4.

Note: Velvet Pillar is a relatively maintenance free tree. It grows into a nicely formed, compact, narrowly upright tree without hardly any pruning or maintenance. Our trees are budded on an MM-111 rootstock, so no suckers need to be trimmed. This appears to be one of the better Crabapples we grow. Not much fruit, as it is seldom ever seen.

Malus 'Velvet Pillar', 1.75-2.00" caliper.

Malus 'Winter Gold', WINTER GOLD FLOWERING CRABAPPLE
 (12-14' tall x 8-10' wide in 15 years)

White flowers; late, yellow fruits; green leaves; rounded overall form.

Deep, carmine flower buds open white (5 petals) are 1 1/4" in diameter. Fruits are yellow with an orange to pink blush, are abundant and spectacular, are 3/8" to 1/2" in diameter, late ripening and persistent. Retain color a long time if planted in a protected area. Has medium green leaves, 2" long, and are disease resistant. Tree is round headed. A 1947 selection from the Department of Parks in the Netherlands. Thought to have *Malus sieboldi zumi* as one of its parents. Will ultimately grow to 20'. Culture: Prefers good drainage. Sun or partial shade. pH 6.0 to 7.5. Zone 4.

Malus 'Zumi Calocarpa', RED BUD FLOWERING CRABAPPLE
(15' tall x 10-12' wide in 15 years)

Bright red flower buds; pure white flowers; dark green leaves with orange-red fall color; red fruit.

Bright red flower buds open into fragrant, pure white flowers with five petals and are 1" in diameter. Flowers are produced in great abundance every year, regardless of cold freezes, frosts or severe cold. Flower buds are absolutely hardy. Bears fruit heavily every year. Fruit is 1/4" to 3/8" in diameter, is a very showy bright red and is persistent until Spring. The heavy crop of fruit is usually harvested in mid January by cedar waxwings and robins as they routinely fly from tree to tree. They usually swallow these fruits whole, because of their small size, during below freezing temperatures with snow covering all about.

Leaves are 2 to 3" long, medium green with a slight gloss. A few leaves have slight two lower lobes showing. Good orange-red fall foliage color. Normally growing rounded, is somewhat dwarf in nature. Trees can be trained to have very interesting branch characteristics with some inner pruning.

Red Bud Fl. Crabapples is one of the very finest Flowering Crabapples for all seasons, with outstanding flowers, fruits, foliage, fall color, and interesting branch characteristics. Plant as a specimen tree to attract winter birds, as a street tree, or in groups for screening out unsightly views, use as a dust shield or as a sound barrier.

When used as a street tree, limbed up, will create a snowfall of flower petals as they flutter away in gentle breezes. They will actually cover the sidewalks or ground beneath
